

Paraphrase the following:

Attenborough's grave intervention came the same day the head of the UK's Environment Agency said the world was already hitting "worst case scenario" levels on the climate crisis. Without more action, he said that ecosystems everywhere face catastrophe. It's a big year for climate. In November, the most significant international climate conference since the Paris Agreement — called COP26 — is being hosted by the UK government in Glasgow, Scotland. If the world is going to get back on track, this will be a vital moment for action. "The UNSC is tasked with confronting the gravest threats to global peace and security, and that's exactly what climate change represents," Johnson said at the meeting. "Unlike many issues the council deals with, this is one we know exactly how to address." He added: "By helping vulnerable countries adapt to climate change and cutting global emissions to net zero, we will protect not only the bountiful biodiversity of our planet, but its prosperity and security." Attenborough urged the council to recognise the threat of the climate crisis to global security, question existing economic models, and put a value on nature beyond money. He said this may very well be our last chance. Although it's impossible to now avoid climate change, the broadcaster insisted that if the world came together now, a healthy balance was still possible. _ **'It's Too Late': 5 Key Things to Know From David Attenborough's UN Climate Change Speech by By James Hinchings-Hales February 24, 2021**
